

PRUEBAS (IMPLEMENTACIÓN)

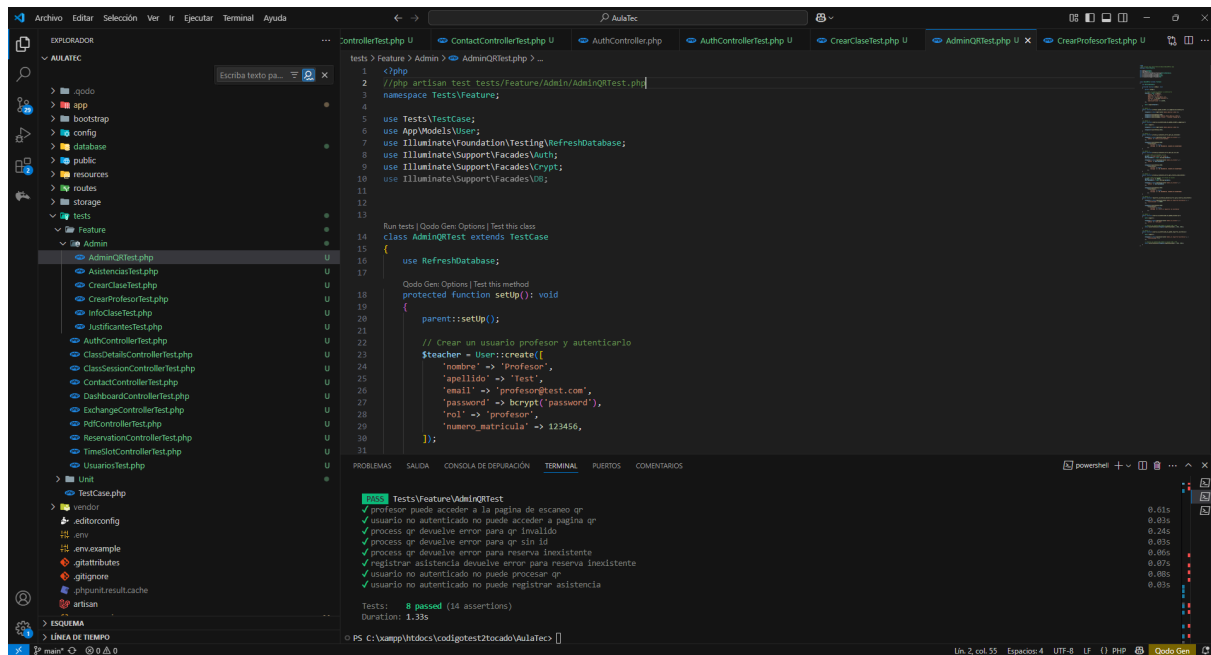

Se han realizado Test de Características (Feature Test) de cada controlador. Para ejecutar un test, deberá dirigirse a esta ruta en el proyecto:

“AulaTec/tests/Feature” ,

y escoger entre controladores generales o específicos del panel de Admin. Dentro del archivo, encontrará en la parte superior el comando comentado para pegarlo en la consola y ejecutarlo. Ejemplo:

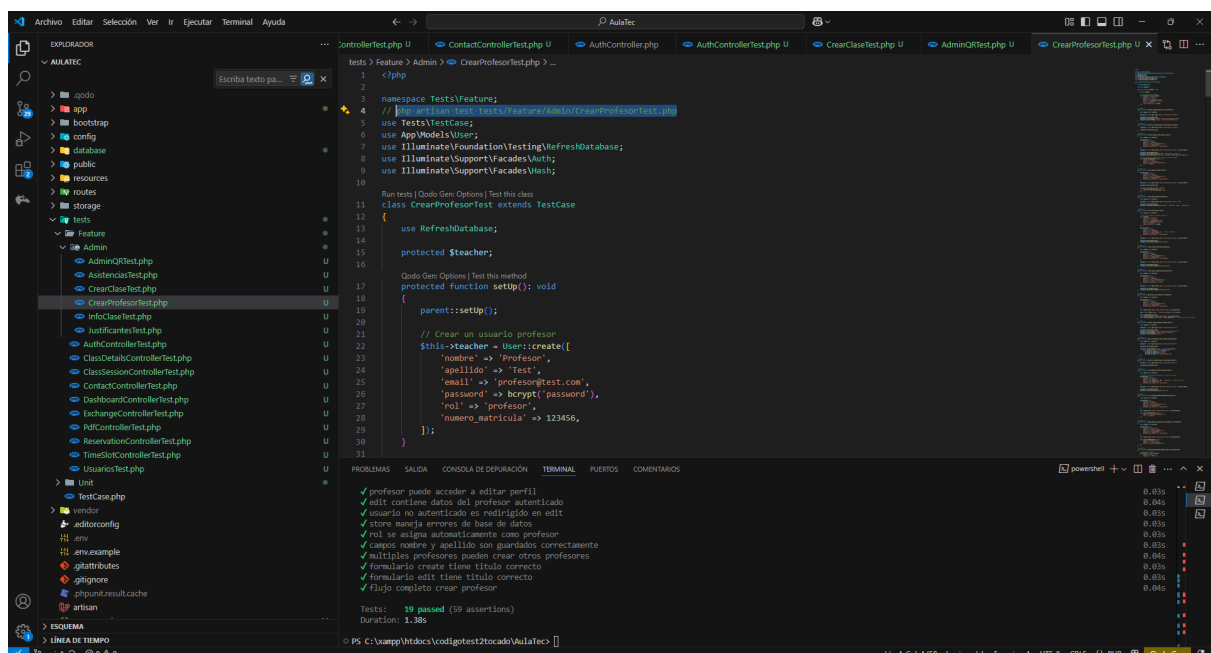

```
// php artisan test tests/Feature/Admin/CrearProfesorTest.php
```

Ejemplos de Feature Tests del Proyecto del panel de Admin:

The screenshot shows the AdminQITest.php file in the IDE. The code defines a test class for the AdminQI controller. The test results show that 8 tests passed (14 assertions) and the duration was 1.33s. The tests include:

- profesor puede acceder a la pagina de escaneo qr
- usuario no autenticado no puede acceder a pagina qr
- process qr devuelve error para qr invalido
- process qr devuelve error para qr sin id
- process qr devuelve error para reserva inexistente
- registrar asistencia devuelve error para reserva inexistente
- usuario no autenticado no puede procesar qr
- usuario no autenticado no puede registrar asistencia

The screenshot shows the CrearProfesorTest.php file in the IDE. The code defines a test class for the CrearProfesor controller. The test results show that 19 tests passed (59 assertions) and the duration was 1.38s. The tests include:

- profesor puede acceder a editar perfil
- edit contiene datos del profesor autenticado
- usuario no autenticado es redirigido en edit
- store maneja errores de base de datos
- rol se asigna automaticamente como profesor
- campos nombre y apellido son guardados correctamente
- multiples profesores pueden crear otros profesores
- formulario create tiene titulo correcto
- formulario edit tiene titulo correcto
- flujo completo crear profesor

Ejemplos de Feature Tests del Proyecto del panel de Alumno:

```
